<b>TAX (0%):</b>			INR 0.00
<b>TOTAL:</b>			INR 2,000,000.00

Virtual Reality companies in India have brought in a digital transformation within the enterprises. A company that followed a traditional approach to training and skilling has now opted for novel VR technology to better skill and educate their employees. [Virtual Reality companies in India](#) are making immersive and interactive solutions for not only India but for the world. One of the most prominent reasons for seeing Virtual Reality companies in India growing at a rapid scale is the demand by the sectors across Oil and Gas, Energy, Power, Automotive, and many other industries to enhance productivity and training of the employees. Many large sector enterprises are looking for Virtual Reality solutions to implement it in their training program. By doing so, organizations don't have to spend a lot of money on building an infrastructure for training purposes, instead of using the 3D simulation of various real-life scenarios, workers can be trained and analyzed. All in all, workers don't have to worry about injuries and accidents as training happens in a safe and controlled environment. Since the lockdown, many industries have been demanding digital tools for remote multi-collaboration and training. This is where Virtual Reality hits the right note. Virtual Reality allows users to get immersed in an environment that is believable. This is because of the heightened presence which makes the environment surreal.
